	<b>Index</b>	<b>7</b>

Django Archive provides a management command that will create a compressed archive of database tables and uploaded media.

## 1.1 Installation

Django Archive is distributed as a Python package through [PyPI](#).

### 1.1.1 PyPI Package

Installation on most platforms consists of running the following command:

```
pip install django-archive
```

### 1.1.2 Project Setup

Once the package is installed, it must be added to `INSTALLED_APPS`:

```
INSTALLED_APPS = (  
    # ...  
    'django_archive',  
)
```

## 1.2 Usage

Interacting with Django Archive is done through a set of management commands.

### 1.2.1 Creating an Archive

To create an archive, use the `archive` management command:

```
python manage.py archive
```

This will create a compressed archive in the current directory containing a single fixture in JSON format and all uploaded media.

### 1.3 Settings

Django Archive provides a number of settings that can be used to customize its behavior. These settings are optional, but may be modified on a per-project basis in the project's `settings.py`.

#### **ARCHIVE\_DIRECTORY**

**Default** *empty*

Path to a directory where the archives will be stored. The default behavior is to create the archive in the current directory.

#### **ARCHIVE\_FILENAME**

**Default** `'%Y-%m-%d--%H-%M-%S'`

String passed to `strftime()` to determine the filename of the archive that will be generated.

#### **ARCHIVE\_FORMAT**

**Default** `django_archive.archivers.TARBALL_BZ2`

Format used for creating the compressed archive. The options currently available include:

- `django_archive.archivers.TARBALL`
- `django_archive.archivers.TARBALL_GZ`
- `django_archive.archivers.TARBALL_BZ2`
- `django_archive.archivers.TARBALL_XZ`
- `django_archive.archivers.ZIP`

The predefined constants enable you to easily specify the archive format in your `settings.py`:

```
from django_archive import archivers
ARCHIVE_FORMAT = archivers.ZIP
```

#### **ARCHIVE\_EXCLUDE**

**Default**

```
(
    'contenttypes.ContentType',
    'sessions.Session',
    'auth.Permission',
)
```

List of models to exclude from the archive. By default, this includes session data and models that are automatically populated.

## CHAPTER 2

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
